**Hiring Manager**

Wipro Limited

Hyderabad, Telangana, India

**Subject:** Application for Developer Role (Req Id: 100326)

Dear Hiring Manager,

I am writing to express my keen interest in the **Developer role at Wipro**. With hands-on experience in **Python, SQL, Azure Data Factory, and full-stack development**, I bring a strong foundation in building scalable applications, optimizing data pipelines, and delivering high-quality software aligned with client requirements.

During my internships with **EY and AICTE-Shell**, I developed end-to-end projects involving **ETL processes, dashboards, and automation workflows**, where I gained experience in **coding, debugging, and documentation** across the software development lifecycle. My project on **HR Data Analytics Dashboard (Power BI)** is a key example of integrating multiple data sources into a streamlined reporting system, improving decision-making efficiency by 25%.

At Wipro, I am particularly excited about contributing to projects that require **designing, testing, and deploying client-facing applications** while ensuring reliability and performance. My technical expertise, combined with strong problem-solving, documentation, and collaboration skills, positions me to add value to your team and deliver solutions with measurable impact.

I would be grateful for the opportunity to discuss how my skills and experiences align with the **Developer position at Wipro**. Thank you for considering my application, and I look forward to contributing to Wipro's vision of driving innovation and digital transformation.

Sincerely,

**Vishal Golhar**
